## Profile setup for Soft Proofing

\*\*\*Before reading on, you should always first calibrate your monitor. Also, please refer "RGB to CMYYK Conversion setup" before following the rest of the "Soft Proofing Profile" Steps.

RGB has a larger gamut than CMYK, therefore for most general situations we suggest to make overall color adjust-This soft proofing profile setup is solely for soft proofing on your monitor and is NOT for RGB to CMYK Conversion . (please refer to RGB to CMYK Image Conversion section).

By downloading Forga ICC Profile from website (http://www.eci.org/en/downloads#icc\_profiles\_from\_eci). you are able to preview from your monitor (soft-proofing) to match closer to ISO Forga 39L proofing results. Follow these six steps:

đ	Photoshop	File	Edit Image	Layer	Type	Select	Filter	View	Window	Help
0			Undo			#Z

## Step 5:

OK

Note: It is a good fail-safe ptactice to check these "Profile Mismatches" & "Missing Profiles" check boxes so that Photoshop will prompt you accordingly.

	The document "A9R2699406.tif" has an embedded color profil that does not match the current CMYK working space.
2	Embedded: U.S. Web Coated (SWOP) v2
	Working: ISO Coated v2 (ECI)
	- What would you like to do?
	Use the embedded profile (instead of the working space)
	Convert document's colors to the working space
	<ul> <li>Discard the embedded profile (don't color manage)</li> </ul>

Cancel

## Step 6:

Step 4:

results.

When open the documents they may not have the same soft proofing profile as you have choosen - "ISO Coated v2" ICC Profile under the CMYK Working Space. And when you open those mismatched documents the above window will pop open to prompt you. Please select, "Discard the embedded profile (don't color manage)" and click OK to continue so that you can work with Forga ISO Coated V2 ICC profile.
